DRUM ROTALIFT

data sheet

DESCRIPTION

A selection of heavy duty compact drum lifting and dispensing solutions designed to lift cable drums vertically. Also known as rotating drum lifters or drum lifting shoes, Ritelite's Drum Rotalifts have been designed to rotate easily. When folded the Drum Rotalift is inserted into the centre hole of the drum, the retractable arms will then fold outwards and grip tightly onto the inner drum allowing the cable to unreel while the drum is suspended in the air. The Ritelite Drum Rotalift with a maximum lift capacity of 5,000kg has a 3 point contact for greater stability.
